

Solutek

CORPORATION

New PAGE Preferred Supplier

Solutek has been approved as a PAGE Preferred Supplier

Boston, MA – July 1, 2010 - Solutek is pleased to be acknowledged as a PAGE Preferred Supplier. We remain committed to supplying the best value in the highest quality prepress chemistry to PAGE members.

For over 60 years Solutek has been formulating and manufacturing high performance chemicals for processing printing plates and films. Unlike the big OEM suppliers we don't sell plates or films, rather our total commitment is to optimize the qualities of these plates and films through the development of our proprietary chemistries. We specialize in making the job of processing these pre-press materials easier and less costly resulting in greatly reduced operational costs and set up times. Our customers have reported that Solutek chemistries run significantly cleaner and provide longer plate life than the equivalent OEM products. All our products are provided in easy-to-handle 2.5 gallon jugs.

With locations in Boston, Dallas, and Los Angeles, Solutek can provide fast and reliable deliveries throughout the U.S. Developers, Finishers, and associated products are available for all of the major computer-to-plate and analog plate materials used by newspaper and commercial printers. Our Developers and Fixers are been stringently tested and qualified on all graphic arts films and papers. A complete family of chemistries for Photo Direct polyester and paper printing plates rounds out our product line.

About Solutek:

Photographic chemicals have been Solutek's business since 1961. It is the oldest manufacturer of these highly-specialized products in continuous operation in the United States, under the same ownership.

Solutek formulates and manufactures chemicals which are used in medical, scientific, technical, and industrial photographic processing laboratories. Our broad range of chemicals is marketed under the Solutek label either as off-the shelf items or as custom-formulated solutions for specific applications. We also produce and package private-label chemicals on a large scale, and we supply these stock or custom formulations to major companies in the X-ray, microfilm, industrial photographic, and graphic arts industries.
